

EXERCISE 2: Design your own human space flight mission patches

What you'll need: paper, felt-tips or colouring pencils

What to think about whilst designing your patch:

- If you were part of the Artemis crew about to go to the Moon, what would you include in your design?
- What kind of people might be going to the Moon – women? People from different countries? People with disabilities?
- What new spacecraft could be part of the patch design? (the gateway etc?)
- Could there be a base on the Moon?

Gallery of human space flight mission patches from Project Mercury, Project Gemini, Project Apollo, the Shuttle Program, the International Space Station Expeditions, and SpaceX Crew Missions.
